# Description

XLG-240 series is a 240W LED AC/DC driver featuring the constant power mode. XLG-240 operates from 100~305 VAC and offers models with different rated current ranging between 700 mA and 6.66 A. Thanks to the high efficiency up to 93%, with the fanless design, the entire series is able to operate for -40 $^{\circ}$ C ~+90 $^{\circ}$ C case temperature under free air convection. The design of metal housing and IP67 ingress protection level allows this series to fit both indoor and outdoor applications. Moreover the innovative environment-adaptive capability allows this series to reliably light on the LEDs for all kinds of application environments in almost any spots that may install LED luminaires in the world. XLG-240 is designed with the latest version of IEC61347/GB19510.1 and UL8750 international safety regulations. The output and dimming circuit are also completely in accordance with the new regulations with isolation to ensure the user and luminaire system safety during installation.

- Nipple & noise are measured at 20MHz of bandwidth by using a 12" twisted pair-wire terminated with a 0.1ur & 47ur parallel capacitor.
   Tolerance: includes set up tolerance, line regulation and load regulation.
   De-rating may be needed under low input voltages. Please refer to "STATIC CHARACTERISTIC" sections for details. If continually operate with AC on/off in short time, it may causes PWM driver IC into protection status.
   Length of set up time is measured at first cold start. Turning ON/OFF the driver may lead to increase of the set up time?
   Only for XLG-240 I series, and I series without UL/CSA certificate.
   The driver is considered as a component that will be operated in combination with final equipment. Since EMC performance will be affected by the complete installation, the final equipment manufacturers must re-qualify EMC Directive on the complete installation again. complete installation, the final equipment manufacturers must re-qualify EMC Directive on the complete installation again.

#### ※ 3 in 1 dimming function (for AB-Type)

- Output constant current level can be adjusted by applying one of the three methodologies between DIM+ and DIM-:
   0 ~ 10VDC, or 10V PWM signal or resistance.
- Direct connecting to LEDs is suggested. It is not suitable to be used with additional drivers.
- Dimming source current from power supply: 100  $\mu$  A (typ.)

Note: 1. Min. dimming level is about 8% and the output current is not defined when 0% < Iout < 8%.

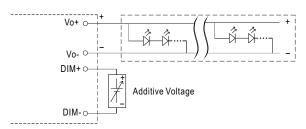

- 2. The output current could drop down to 0% when dimming input is about 0k $\Omega$  or 0Vdc, or 10V PWM signal with 0% duty cycle.
- 3. When PWM frequency >2K HZ ,the lighting will be triggered at 10~15% PWM duty .
